Prevent complaints with a vertical mouse

We work behind the computer the entire day, handling our mouse or the laptop touchpad.

A traditional mouse and a touchpad place too much strain on the wrist and forearm. This is why there are ergonomic, vertical mice on the market. These mice offer relief to the wrist and forearm.

The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013).
